

OutlookAttachView scans all messages stored in your Outlook, and displays a list of all attached files that it finds. You can easily select one or more attachments and save all of them into the desired folder, as well as you can delete unwanted large attachments that take too much disk space in your mailbox. You can also save the list of attachments into xml/html/text/csv file formats.

System Requirements:

- * Windows 2000/XP/Vista/7/2003/2008/7.
- * Any version of Microsoft Outlook.

SearchMyFiles is an alternative to the standard "Search For Files And Folders" module of Windows. It allows you to easily search files in your system by wildcard, by last modified/created/last accessed time, by file attributes, by file content (text or binary search), and by the file size.

SearchMyFiles allows you to make a very accurate search that cannot be done with Windows search. For Example: You can search all files created in the last 10 minutes with size between 500 and 700 bytes.

After you made a search, you can select one or more files, and save the list into text/html/csv/xml file, or copy the list to the clipboard.

SearchMyFiles is portable, and you can use it from a USB flash drive without leaving traces in the Registry of the scanned computer.

Advanced Renamer is freeware program for renaming multiple files or folders at once. It can use several different methods for calculating the new name including multimedia tools for sound and picture files.

With Advanced Renamer you can construct new file names by adding, removing, replacing, changing case, or giving the file a brand new name based on known information about the file.

This program is a great utility for organizing digital pictures for both professionals and beginners. The thumbnail mode lets you display thumbnails directly in the file list giving you maximum control of the renaming process.

Features:

- * Undo functionality
- * Real time preview
- * MP3/ID3 renaming

- * Image renaming with EXIF support
- * Thumbnail view
- * Supports both files and folders
- * Several renaming methods
- * Use multiple method at once

Plus, Lou told us about www.quibids.com You purchase bid bucks for as little as \$0.60 each and then bid on items like you would in a silent auction. A timer is displayed to show the time left and when the clock runs out the highest bidder takes home the item. Well, it gets shipped to the highest bidder.

While we were looking at the site today a \$1,500 Apple notebook had the high bid of \$80.47. Don't know what the final bid was 'cause we didn't register and log in, but I'm sure it wasn't \$1,500. Check it out.

Nitro PDF (64-bit version)

Here's what PC World has to say about it - Nitro PDF Reader is the most powerful free PDF reading and creation tool you can find, performing many tasks usually only available in for-pay PDF tools. As a PDF reader, it's lightning fast. For example, it opened a 174-page graphics-heavy PDF nearly instantly--faster than any other PDF reader I've tried, including [FoxIt Reader](#), [Nuance PDF Reader](#), and [Adobe's own PDF reader](#), among others. It lets you search, zoom in and out, rotate pages, and more, pretty much everything that you'd expect from a PDF reader.

It does more as well. You can add notes, highlight text, type text into a text box, insert a signature into a PDF and much more, including commenting on other people's notes. Nitro PDF also does a very nice job of extracting text and images from PDF files. The program will even take a form scanned in via a scanner as a PDF file and let you type directly on the PDF form.
